Claim:

We claim:

- A carry-on case having a tapered upper portion that comprises an all-sides accessible
 pocket with a zipper track defining almost all of the edges thereof, through which the
 interior of the pocket can be accessed from a top edge of said pocket or from the left and
 right sides of said pocket or from a bottom edge of said pocket.
- The carry-on case of claim 1 wherein said zipper track defining the bottom edge of said all-sides accessible pocket is closed securely by a securing feature.
- 3. The carry-on case of claim 1 further comprising a telescoping towing handle and wheels for ease of transportation.
- 4. The carry-on case of claim 3 wherein said wheels are castor wheels.
- 5. A method for accessing items within a carry-on case by providing a tapered upper portion and an all-sides accessible pocket, the interior of which can be accessed while said case is being stowed in an aircraft overhead compartment or under a forward passenger's seat from a top edge of said pocket or from the left and right sides of said pocket or from a bottom edge of said pocket.
- 6. The method of claim 5 wherein said step of accessing said items further includes providing security of said items within the all-sides accessible pocket by providing a securing feature that maintains a closure of a bottom edge of said pouch so that the items are not lost when the case is shifted from a resting position to an upright position.
- 7. The method of claim 5 wherein said step of accessing items within said case further includes transporting said case by providing a telescoping towing handle and wheels.
- 8. The method of claim 7 wherein said step of transporting said case comprises providing castor wheels.

- 9. The method of claim 6 wherein said step of accessing items further includes transporting said case by providing a shoulder strap.
- 10. The method of claim 6 wherein said step of accessing items further includes providing a backpack, said backpack being transportable by at least one backpack strap.
